

Manage your child's fear and anxiety before they become a problem

If your child is between the ages of 6 and 17 and has just one or two fears, even mild ones, he or she may qualify to participate in an innovative research study to help stop those fears.

Your child will attend 8 brief sessions over a 4-week period and play interactive computer games. Families will be compensated \$\$ for their child's participation, including attending a follow-up appointment after 8 weeks.
